Leister delivers performance.

For 70 years, Leister has been the worldwide leader in the field of plastic welding and industrial hot-air applications. In addition we also offer innovative and effective lasersystems and microsystems. Leister is proud to develop and produce all products in Switzerland – so you can always rely on the proverbial Swiss made quality.

Over 98 percent of our products are exported. With an established network of 130 sales and service centers all over the globe, you will find a Leister partner guaranteed. We are local worldwide.

PLASTIC WELDING

For decades now, Leister has been the worldwide market leader. The performance and reliability of our products makes Leister the first choice. Our tools are used in roofing, billboards, tarpaulins, civil engineering, tunneling, landfills, flooring, plastic fabrication, and shrinking to name a few.

PROCESS HEAT

Hot-air is increasingly deployed in industrial processes. Typical applications include activating, heating, curing, melting, shrinking, welding, sterilizing, drying and warming to name a few. Leister customers profit from our extensive engineering knowledge and benefit from our recommendations during the conceptual design of hot-air applications.

LASER PLASTIC WELDING

Leister's innovative and patented laser bonding solutions provide alternative production processes in automotive, medical, sensor, electronics and textile manufacturing as well as microsystems technology. Our clean, precise and non-invasive laser technology can also be applied to process heat applications.

Hot-air for industrial processes

Wherever you need heat, Leister Technologies AG provides high quality hot-air blowers, air heaters and blowers. Additionally, a wide range of accessories facilitate integration of the equipment into production processes. There is a wide range of applications – Leister offers the appropriate solution.

Research and development

With years of experience in plastic processing and industrial processes we are the ideal partner to work your application. We take pride in consistently developing new and innovative products as well as continually improving existing products. We strive to provide our customers with outstanding quality, reliability, performance and cost-efficient products.

Quality management

As an innovator, Leister commits to transparent and consistent quality management. Leister Technologies AG is certified to comply with the ISO 9001 quality standards. All processes are regularly audited and improved to comply with all quality-relevant criteria; therefore, our products enjoy a reputation of providing reliable service even after years of use - even under adverse conditions!

Testing and certification

Our products are designed and developed to comply with nationally and internationally recognized standards. These include both product-specific standards – such as ISO, IEC, EN or UL standards – as well as application-specific standards. For our client's protection, tests are carried out by accredited and independent test institutes. The products are then certified and qualified to carry the conformity marking.

Application and laboratory testing

Our team of experts will assist you in choosing the right equipment for your application process. Running a series of tests on your applications will help optimize processes. Leister's internal applications laboratory allows for comprehensive testing of all manufactured tools and equipment. This testing provides accurate process analysis and documentation to our customers.

More than 130 Sales and Service Centers in over 100 countries

We believe that the basis for customer satisfaction lies within the quality of our products and the smooth operation of our global service network. A close network of more than 130 sales and service centers in more than 100 countries ensures competent and responsive service. Distributors and their staff are trained and certified by Leister on a regular basis; therefore, Leister know-how is locally available to you at all times.

Leister hot-air technology: Proven thousands of times.

- heating
- shrinking
- welding
- activating or detaching
- igniting and burning

- removing
- separating or fusing
- pasteurizing and sterilizing
- smoothing and shining
- accelerating

- dissolving
- connecting
- simulating
- de-icing
- inspecting

Food industry: To ensure that candy looks as good as it tastes, it is smoothed after production using precisely controlled hot air from Leister.

Paper industry: Freshly printed paper – from simple labels to banknotes – is often dried with hot-air after printing to ensure high print quality while enabling faster processing speeds.

Automotive industry: To permanently attach interior panels and plastic trim, plastic rivets have to be heated and the rivet heads formed with cold dyes. Using several Leister LE MINIs, the individual rivets can be heated simultaneously with pinpoint precision.

Brewing and beverage industry: Shrinkable plastics are increasingly replacing metal caps. A Leister HOTWIND or an LHS series air heater with the appropriate blower supplies the reflector with hot air.

Cosmetics: Hot air is used in several stages during the production of lipstick. For example, to give the lipstick a glossy finish. Afterwards, a plastic film is shrunk onto the product using hot-air during packaging.

Logistics: To ensure the pallets' load doesn't separate or spill, a PE shrink film cover is placed over it and shrunk using a Leister hot-air blower.

Food industry: Thanks to Leister, the PE-coated milk carton can be dried, sterilized and welded.

Food industry: Coffee can be roasted with hot air using Leister products. To ensure high quality roasting, the temperature is precisely controlled.

Why do our customers trust Leister?

Leister hot-air systems are deployed in countless industrial production processes. There is hardly an industry which does not profit from the diverse advantages – whether through cost-effectiveness or because many processes simply become more efficient with hot air.

Know-how

Decades of experience in plastics processing and in industrial processes make us the ideal hot-air technology partner.

Consulting

As the worldwide market leader with our network of more than 130 sales and service centers in more than 100 countries — we are always local and can provide assistance at your location.

Extensive Leister product range

Every hot-air application in all industrial processes can be matched with products from Leister.

Our extensive product range includes:

- Innovative, system-compatible air heaters
- Powerful, robust blowers
- Compact, flexible hot-air blowers
- Comprehensive range of accessories

Customized solutions

Along with our broad product range, we also offer products developed according to your individual specifications.

Development

We constantly develop and optimize our products. Our customers benefit from continuous improvement, high quality, reliability, performance and cost-effectiveness.

Application laboratory

Our application laboratory is equipped with the most up-to-date measuring equipment and therefore extremely well-suited for simulating applications and processes. With this service, we support you in finding a fast and efficient solution.

Independent safety testing

Independent testing is yet another feature Leister offers to ensure top quality and safety of our products. All Leister air heaters and hot-air blowers are tested by the independent test center “Electrosuisse”.

Combination options with air heaters, blowers and temperature regulators.

The new MISTRAL: The incomparable hot-air blower.

Two model groups are available in this range – the MISTRAL 2 and 6 PREMIUM, and the top-of-the-range MISTRAL 6 SYSTEM. All MISTRAL 6 devices are equipped with a maintenance-free brushless blower motor, making them perfectly-suited to continuous operation. The MISTRAL 6 SYSTEM can either be operated using its integrated controls or via an external system interface.

Hot-air blower

MISTRAL PREMIUM / SYSTEM

1		Maintenance-free Thanks to its brushless motor, the new MISTRAL [®] PREMIUM / SYSTEM is perfectly suited to continuous operation
2 / 3		Innovative: Using the "e-drive" operating unit, the air volume and temperature for the MISTRAL SYSTEM can be adjusted to suit every application. Fully-integrated: Main switch with integrated push button function for programming (MISTRAL SYSTEM).
4		Multifaceted: Can be operated as a device with integrated control or via an external system interface for integration into a closed-loop system (MISTRAL SYSTEM).
5		Informed: Display with user status information and programming (MISTRAL SYSTEM).

	PREMIUM		SYSTEM
	2	6	6

MISTRAL SYSTEM

6		Innovative design: Special baffle for an even airflow distribution and an optimised, aerodynamic airflow velocity.
7		Integrated: Thermocouple in the MISTRAL SYSTEM for enhanced precision.
8		Quick to connect: Thanks to the integrated air-hose connection adapter with its internal 1-inch thread, an additional adapter is not required.
9		Convenient: Its state-of-the-art industrial design and convenient mounting tabs are sure to impress.
10		Automatic cooling: The MISTRAL SYSTEM is equipped with an automatic cool-down function. In the MISTRAL PREMIUM, the blower and heater can be controlled separately.
11		Easy to switch: The MISTRAL PREMIUM can be switched from an internal to an external potentiometer (optional). As a result, the temperature can even be controlled from the outside.

Accessories

HOTWIND PREMIUM / SYSTEM: The versatile hot-air blower.

Its brushless motor ensures that this hot-air blower has a long service life. The air volume can now be set infinitely up to 900 l/min via the potentiometer. The wide range of applications makes the new HOTWIND SYSTEM truly impressive: be it as a unit with integrated control or as a unit for integration in a closed-loop control circuit using a system interface.

Hot-air blower

HOTWIND PREMIUM / SYSTEM

HOTWIND SYSTEM

1		Infinitely adjustable: Potentiometers for stepless adjustment of the heater and blower (PREMIUM and SYSTEM).
2		Remote controlled: Interface with alarm contact in the HOTWIND SYSTEM for controlling the air volume and heat output, using 4 – 20 [mA] or 0 – 10 [V] signal.
3		Integrated: Thermocouple in the HOTWIND SYSTEM for even greater precision.
4		User friendly: Display on the HOTWIND SYSTEM provides the user with status information.
5		Cleverly combined: Main switch with integral function button for programming (SYSTEM).
6		Automatic cooling: HOTWIND PREMIUM and HOTWIND SYSTEM are equipped with an automatic cool-down function.

VULCAN SYSTEM: The clever muscle man.

The muscle man among the hot-air blowers leaves no doubts about its performance. It is compactly built and easy to integrate into industrial processes. Just as Leister's smaller hot-air blowers, VULCAN SYSTEM can be controlled remotely through a standard analog interface.

IGNITER BM4 / BR4 – Ignites just about anything.

The new IGNITER ignition blower from Leister has been specially developed for installation into pellet and wood chip boilers. The IGNITER BR4 with 3.4 kW has what it takes. The interface was selected so that the ignition blowers can easily be installed into any heating boiler.

Hot-air blower

IGNITER

1		Easy: Connector plug located directly on the device means easy removal and installation and fewer device configurations.
2		Clever: New assembly support for positioning in the furnace.
3		Linked: Connection adapter for air hose located directly on the device with inner 1" thread (no extra accessories needed).
4		Additional: Pipe joint adapter with M14 thread for easy adaptation of the heat conduction lines and extensions (available only for IGNITER BM4).
5		Protected: Heating element protection with phototransistor and device protection via temperature protection circuit.

red dot design award
winner 2013

Clean ignition process due to optimum heat level.

Leister's air heaters: From mini to giant.

Leister's air heater highlight:
The LHS series.

Picture: LHS 21S SYSTEM (p. 28 – 29)

1		Compact: Small dimensions for installation in tight spaces.
2		Reliable: Very durable heating elements thanks to innovative, patented heating element protection.
3		Easy Maintenance: Faster and easier heating element change.
4		Power electronics: External power control becomes obsolete and system design times are reduced.
5		Thermocouple: The integral thermocouple in SYSTEM devices improves precision and enables reproducibility.
6		User friendly: The display of the SYSTEM devices provides users precise local information.

7 Professional integration or controlled stand-alone operation

Operation modes LHS SYSTEM	Control mode	Adjustment mode
Internal (potentiometer) set point.	Temperature set point by potentiometer. Display shows temperature set point and actual temperature.	Capacity set point by potentiometer. Display shows capacity set point in % and actual temperature.
External (interface) set point.	Temperature set point by external controller. Display shows temperature set point and actual temperature.	Capacity set point by external controller. Display shows capacity set point in % and actual temperature.

The LHS air heater family

The LHS air heater family covers an impressive power range from 550 W to 40 kW. The diversity of this portfolio makes it ideal for practically all hot-air applications. By choosing LHS air heaters, you are investing in devices that are manufactured using state-of-the-art technology. Between them, the CLASSIC, PREMIUM and SYSTEM models offer the ideal solutions for users' differing requirements.

LED display (target/actual value display)			✓ *
* = except the LHS 91 SYSTEM			

Alongside its optimised design and traditional Leister quality, the patented heating element protection guarantees yet another increase to the service life of the heating element. Thanks to their built-in temperature probes and controllers, integrating the LHS SYSTEM air heaters has never been easier. The integrated power electronics make external power controls a thing of the past and even simplify the wiring.

LHS 15: Tiny and reliable.

The tiny air heater provides hot air up to 650 °C. All prominent features of Leister air heaters also are offered with this tiny heater: long-life heating element, reliable protection systems, standard interfaces. Simply summarizing – the same Leister quality as usual. This makes it a perfect tool for applications in Semiconductor, Electronics, Automotive and other industries.

Accessories

LHS 21: Designed for professionals.

These advanced air heaters are distinguished by their extremely small dimensions – especially the lean design (only 67 mm wide) – as well as their long service life. Designed for professional integration into machine systems, the new LHS series enables any specific application. Sterilizing, drying, welding, cleaning, shrinking, shaping, deburring and activating are now more efficient and reliable thanks to Leister's proven hot-air technology!

LHS 41: Small but high performance.

The medium size LHS 41 series air heaters cover an extremely wide application range. The small footprint enables easy integration into machines. The heater tube diameter of 50 mm allows passing sufficient air flow, also for high performance applications.

New LHS 210/410

Leister Air Heaters LHS 210/410

1

Compact:
Small dimensions for installation in tight spaces.

2

Connection:
Connecting the power supply is also very easy thanks to the well thought-out design.

3

Various versions:
SF = Single Flange
SF-R = Single Flange for Recirculation
DF = Double Flange
DF-R = Double Flange for Recirculation

4

Compatible with various nozzles:
The LHS SF is compatible with numerous nozzles from Leister, which enables countless application possibilities.

5

Double flange for piping installations:
Thanks to its flanges on both sides, the Leister LHS DF / DF-R tubular air heater is easy to install in piping systems and is suitable for a wide range of industrial processes and applications.

6

LHS SF-R / DF-R air heater for recirculation:
The housing connection is located outside the air flow. In addition, the housing connection is protected against overheating, making it possible to work with air inlet temperatures up to 350°C.

LHS 210

The LHS 210 is a small air heater from the Leister. Due to its particularly compact design, it can be easily integrated into industrial plants with limited space.

The housing connection on the LHS 210 is located outside the air flow, allowing the air to flow through the air heater unhindered and with hardly any loss in pressure. In addition, the housing connection of the LHS 210 SF-R and DF-R is protected against overheating, making it possible to work with air inlet temperatures up to 350°C.

Optional temperature regulation

With CSS/E5CC and Solid state relay (p 64 – 65)

The LHS 210 SF/DF (-R) HT is Leister's smallest high temperature air heater. Built extremely small, this industrial Leister air heater delivers a maximum air outlet temperature of 900 °C, making it particularly efficient. The connection housing of the LHS 210 SF-R HT and DF-R HT is also protected against overheating, making it possible to work with air inlet temperatures of up to 350 °C.

LHS 410

The LHS 410 is a compact air heater from Leister. It offers an even higher air volume than the LHS 210. Thanks to its small design, it can be easily integrated into various industrial processes with limited space. Connecting the power supply is also very easy due to the well thought-out design.

The housing connection on the LHS 410 is located outside the air flow, allowing the air to flow through the air heater unhindered and with hardly any loss in pressure. In addition, the housing connection of the LHS 410 SF-R and DF-R is protected against overheating, making it possible to work with air inlet temperatures up to 350°C.

High temperature air heater: Our hottest models.

The high temperature air heaters are suitable for temperatures up to 900 °C. The devices have no integrated power electronics.

High temperature air heater

LE 5000 HT (up to 900 °C)

Technical data

High temperature LE 5000 HT

No integrated power electronics		•
Heating element tube with protective tube		•
Max. air outlet temperature	°C	900
Min. air flow	l/min	580
Max. air inlet temperature	°C	100
Max. ambient temperature	°C	100
Weight	kg	2.25

Mark of conformity

Protection class I

Minimum quantity of air at air inlet temperature of 20°C at 100% heating power
NI = Standard litres according to ISO 6358

Installation dimensions in mm

Optional temperature regulation

With CSS/E5CC and Solid state relay (p 64 – 65)

Voltage	V ~	3 × 400
Power consumption	kW	11
Order no.		108.717

Combination possibilities

- Leister air heater at maximum heat power and without nozzle with Leister blower at 50 Hz, 1.5 m hose length and unimpeded air outflow.
- Hot-air temperature 3 mm after air outlet, measured at the hottest point.
- Air flow at 20 °C, 100.0 kPa compliant with ISO 6358.

Power-Type	Number LE x Power cons. kW	Air flow l/min.	Temperature °C
ROBUST	1 × 11	1 × 800	800
AIRPACK	1 × 11	1 × 2800	360
AIRPACK	2 × 11	2 × 1500	550

Air flow and temperature values may deviate from those above based on the design of the entire hot-air system (including nozzles, air hoses, environmental conditions).

Accessories

Two LE 10 000 HT air heaters and
an ASO blower in combination
with a shrink tunnel.

Accessories

LE MINI: The precise and accurate minis.

The world's smallest air heater with an integrated temperature probe. Especially suited for applications in which heat is concentrated to a point. It is simple to incorporate into the tightest spaces. LE MINI operates with compressed air at a pressure of 200 kPa. Model versions are available with or without an integrated sensor. The SENSOR KIT add-on box offers a plug'n play solution with its integrated power electronics and temperature regulator.

Save Energy with Leister.

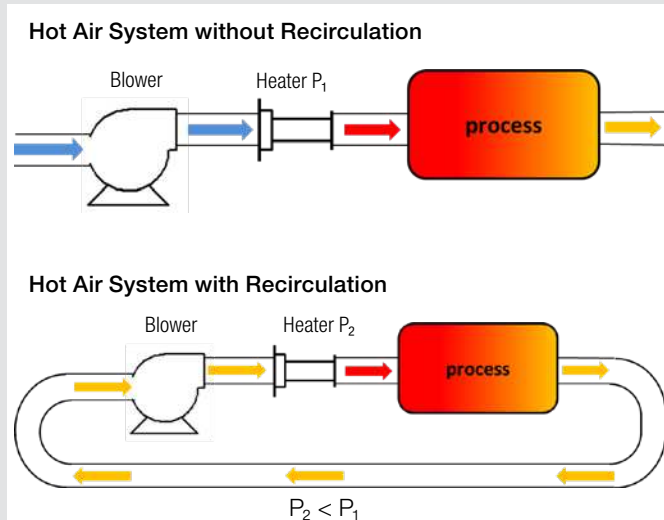

Large amounts of energy and with that, money, can be saved by recycling the hot air. Leister has customized solutions for combining air heaters and blowers which are suitable for recycling hot air thanks to a design made to withstand high-temperatures.

Hot Air Recycling Saves Energy and Costs

In order to heat a defined volume of air (air flow) to the desired temperature, a certain amount of energy needs to be present. The greater the difference in temperatures ΔT between the air inlet and the air outlet, the more energy that is needed. The ΔT is reduced by operating with hot air recirculation. That saves energy and costs.

To 'recycle' the hot air from the process, both the blower and the air heater have to withstand the high temperatures at the air inlet side. LEISTER's double-flange air heaters types LE 5000 DF-R and LE 10000 DF-R (page 56/57) and the RBR blower (page 68) provide the solution. Air with a temperature of up to 350°C can be moved, reheated and recirculated without a problem.

When accessories such as insulated hoses, high-temperature seals and various flanges are added, systems with air heaters and blowers become perfectly supplemented for recycling applications.

Sample calculation:

To heat 4000 l/min of air flow to a desired temperature of T₂ = 500°C, different outputs are required, depending on the air inlet temperature T₁.

T ₁ = 20°C	->	38.7 kW	
T ₁ = 160°C	->	27.4 kW	29.2 % compared with 20°C
T ₁ = 350°C	->	12.1 kW	68.7 % compared with 20°C 55.8 % compared with 160°C

These differences also match the potential savings in energy. The energy savings are 159 600 kWh per year when the recirculation mode is used and the inlet temperature is 350°C, instead of working with ambient air at 20°C (in 24-hour operation, for 250 working days).

Annual energy consumption at T₁ = 20° C > 232 200 kWh.

Annual energy consumption at T₁ = 350° C > 72 600 kWh,

Savings = 159 600 kWh

If the price of electricity (commercial, large consumers) is € 0.12 / kWh, the potential savings per year is € 19,152 just from using DF-R type double-flange air heaters. Based on a 24-hour operation, 250 days per year, T₁ = 350°C instead of 20°C and T₂ = 500°C and 4000 l / min air flow.

Hot air system for hot air recirculation.

LE 10 000 DF-C “Clean Air Heater”.

The Clean Air Heater is the next step in completing the double-flange product range. This air heater is suitable for industries with stringent requirements for “clean” environments such as: food and beverage, medical, pharmaceutical, cosmetics and electronics manufacturing. The LE 10 000 DF-C was developed using the newest standards for clean production defined by the European Hygienic Engineering & Design Group (EHEDG). The Clean Air Heater’s design minimizes particle emission and is exclusively manufactured using nontoxic materials.

The inlet sides special design and materials allow for high air inlet temperatures.

The electrical supply's functioning and safety are guaranteed even under extreme conditions.

The new double-flange air heaters are manufactured using Leister's well-known high quality standards.

High degree of manufacturing quality

photos: Type LE 5000 DF-R

High quality temperature resistant cable

Robust structural design

Designing hot air systems correctly.

Knowledge of the physical properties of all the components used is essential for the correct design of hot air equipment and systems. Two values are of particular importance to the user: Pressure loss depending on air flow and Temperature depending on air flow. Both values are additionally dependent on the heating output of the air heater.

With the construction of a unique measurement system, LEISTER has laid the foundations for the correct physical specification of these interrelationships. For this, systematic measurements across the entire area of utilization of the air heaters and a calculation of the models with the aid of dimensionless key indicators is necessary. As a result, the interconnections of pressure loss, volumetric flow and temperature can be displayed in relation to standard conditions.

Leister measurement apparatus.

Monitoring system

Example of pressure loss and temperature curves for an air heater of the type LHS 61S SYSTEM (3 × 400 V / 6 kW).

Hot Air High Speed Side Sealing

Leister hot air side sealing

LE 5000 HT-U & LE 5000 HT-S

Air Heaters
Controllers

- Reduction of CO2 Footprint
- Factory Safety Requirements
- Operator Safety
- Energy Efficiency
- Process Reproducibility

The hot air sealing unit for liquid packaging include two different units: The LE 5000 HT-U air heater has the hot air outlet on the upper side, while the LE 5000 HT-S blows the hot air downwards. The air outlet openings are designed precisely for welding the longitudinal seam in liquid packaging. Thanks to the great thermal insulation on the units, the maximum amount of energy is implemented in the weld seam.

The sealing unit arrives a production speed up to 700 m/min and operate with an air temperature at 900°C. The customer can control the sealing units very easy on temperatures and airflow, this makes the process much more precise than a process with gas flame.

The Pre sealing units consist of 2 LE 5000 HT-U devices, which are used in the prefold section of the machine shown by Fortuna GmbH.

Hot Air versus Gas Flame

CO₂ Footprint: To reduce the CO₂ footprint hot air offers the option to consume the power from renewable resources like wind power, solar power, etc. Gas cannot offer this benefit since it requires fossil resources.

Factory Safety Requirements: Using hot air eliminates all the costly safety requirements for gas.

Operator Safety: There is no open flame with hot air. Hot air systems are enclosed in organic fiber based ceramics and have a very low surface contact temperature even though the process operates at 900 °C.

Energy Requirement: Typical energy consumption for a flame sealer with gas burners is appropriately 90 kW. Hot air systems also use approximately 90 kW.

Process Reproducibility: Setting up the machine for each type of board is much easier and more precise with electric heaters. The welding seam is much more precise.

SILENCE: The quieter option.

No blower no air! In industrial processes one blower can often supply several air heaters in parallel. Our durable and maintenance-free blowers are a result of uncompromising quality standards and decades of experience. SILENCE, Leister's mid-range blower, is very quiet during operation at 61 dB(A). Developed to withstand operating conditions with air intake temperatures of 100° C to 200° C. Delivers optimum & effortless performance in ambient temperatures up to 75° C.

Accessories

ROBUST: The name speaks for itself.

Very compact design with enormous power. Thanks to efficient sound insulation the ROBUST high pressure blower is very quiet. It can be installed in all orientations and is virtually indestructible even under extreme conditions and continuous operation.

CHINOOK: The high-pressure recycling specialist.

The CHINOOK side channel blower from Leister was specially developed to feed process air up to 350 °C back into industrial processes at high pressure. Its compact insulation, solid construction and the use of high-quality components ensure that the Leister CHINOOK high-pressure blower performs reliably for a long time despite high thermal loads.

Accessories

AIRPACK: The full pressure provider.

If high air pressure is required, the AIRPACK is the answer! It is used wherever large air volumes at high pressure are required. Its impressive power means it can supply several Leister air heaters in parallel. The AIRPACK delivers sufficient pressure to efficiently supply Leister blow-off nozzles.

MONO: Compact with high performance.

In spite of its compact dimensions, the newly-developed, MONO 6 SYSTEM blower continues to impress due to its high air volume of up to 600 l/min. One of its new features is the ability to adjust the air volume, either on the device itself, via the “e-drive” operating unit, or through the external interface. As a result, the blower can be adapted perfectly to suit every application. With its maintenance-free, brushless motor, the blower is ideal for continuous operation.

Accessories  

Accessories SILENCE (Ø 60 mm)

	107.288 PVC air hose Ø 60 mm
	107.287 Hose clip for Ø 38 mm and Ø 60 mm air hose
	107.240 Closing cap Ø 60 mm attachable to hose connection adaptor 107.238 and 107.278
	107.294 Stainless steel filter, push-fit on air intake
	110.887 Motor capacitor 230 V
	107.291 Hose connection adaptor made of PA with 1 air outlet for Ø 38 mm hose, push-fit on air outlet
	107.278 Hose connection adaptor made of PA, push-fit on air outlet
	107.292 Hose connection adaptor made of PA with 2 air outlets for Ø 38 mm hose, push-fit on air outlet
	107.293 Hose connection adaptor made of PA, push-fit on adaptor 107.292
	107.295 Manually-operated air flow adjuster Size 214 × 88 × 133 mm
	107.296 Air flow off/on switch The air flow is interrupted on command (pneumatic 500 kPa) to the heaters. Size 214 × 88 × 133 mm

Special nozzles available on request. Leister does not provide any warranty for its products if using non-Leister blowers or accessories.

Accessories ASO (Ø 90 mm)

	107.237 PVC air hose Ø 90 mm
	107.236 Hose clip for Ø 90 mm air hose
	107.239 Stainless steel filter, push-fit on air intake
	111.771 Motor capacitor 230 V
	107.238 Hose connection adaptor made of PA, push-fit

Accessories MONO (Ø 38 mm)

	153.245 Stainless steel filter kit (Ø 38 mm), push-fit on air intake
	107.286 PVC air hose Ø 38 mm
	107.287 Hose clip for Ø 38 mm and Ø 60 mm air hose

Accessories RBR (Ø 90 mm)

		Air hose HT, temperature resistant up to + 350 ° C, insulated
	152.439	Ø 60 mm, 2 m
	152.440	Ø 60 mm, 5 m
	155.419	Ø 90 mm, 2 m
	155.420	Ø 90 mm, 5 m
	152.518	Hose clip inside for Hose HT Ø 60 bridge type 55 - 75 mm
	152.519	Hose clip outside for Hose HT Ø 60 bridge type 85 - 105 mm
	155.421	Hose clip inside for Hose HT Ø 90 bridge type 95 - 115 mm
	155.422	Hose clip outside for Hose HT Ø 90 bridge type 125 - 145 mm

Accessories CHINOOK (Ø 38 mm)

	166.237	Silicone air hose Ø 38 mm, temperature resistant up to 250°C
	107.287	Hose clip Ø 38/60 mm
	177.081	Air hose Ø 38 mm, temperature resistant up to 350°C, insulated, 2 m
	177.082	Air hose Ø 38 mm, temperature resistant up to 350°C, insulated, 5 m
	177.080	Hose clip inside for air hose DN38
	177.081	Hose clip external for air hose DN38

The combination of blow-off nozzles and blowers allows fast and efficient drying of beverage bottles.

Accessories ROBUST (Ø 38 mm)

	107.290 Hose clip for Ø 19 mm air hose
	107.242 Closing cap Ø 19 mm, attachable to hose connection adaptor 107.298
	107.354 Stainless steel filter, push-fit on air intake
	108.623 Motor capacitor 230 V~ 104.017 Motor capacitor 120 V~
	107.298 Hose connection adaptor made of PA, push-fit on ROBUST blower and adaptor 107.293 for hose connection
	107.281 Hose connection adaptor made of PA (Ø 38 mm), 3 outputs, each 14 mm
	107.287 Hose clip for air hose Ø 38 mm and Ø 60 mm
	107.241 Closing cap Ø 38 mm, attachable to hose connection adaptor 107.292 and 107.293
	107.293 Hose connection adaptor made of PA, push-fit
	108.755 Hand operated air flow adjuster and on/off switch. Size 214 × 88 × 133 mm
	107.299 Air flow off/on switch The air flow is interrupted on command (pneumatic 500 kPa) to the heaters. Size 214 × 88 × 133 mm

Accessories AIRPACK (Ø 60 mm)

	107.287 Hose clip for air hose Ø 38 mm and Ø 60 mm
	107.241 Closing cap Ø 38 mm push-fit on hose connection adaptors 107.292 and 107.293
	107.288 PVC air hose Ø 60 mm
	107.240 Closing cap Ø 60 mm, push-fit on hose connection adaptors 107.278
	107.291 Hose connection adaptor made of PA with 1 air outlet for Ø 60 mm hose. Push-fit on air outlet
	107.292 Hose connection adaptor made of PA with 2 air outlets for Ø 38 mm hose. Push-fit on air outlet
	107.278 Hose connection adaptor made of PA, Push-fit on air outlet
	110.895 Stainless steel filter, push-fit on air intake
	Blow-off nozzle, push-fit Outlet opening adjustable 1 – 5.5 mm 125.907 a = 300 mm 125.908 a = 482.6 mm Connector Ø 60 mm

Special nozzles available on request
Leister does not provide any warranty for its products if using non-Leister blowers or accessories.

Frequency converters: More power for your blower.

Because air volume and heating performance can be set independently, precisely and reproducibly from each other, the C 200-012 and C 200-034 frequency converters improve your hot-air processes. The C 200-012 and C 200-034 give the blowers the flexibility to adjust the air volume up or down.

Useful formulas: Help yourself.

Most industrial processes require energy. Bringing energy into processes requires power and time. The following there are some simple, basic calculations that can give first estimations on required heating power. Additional application tests are always recommended and supported by Leister.

The following formulas are meant as rules-of-thumb. They can be employed as first estimations to plan equipment. The calculated values serve as approximate values. Losses are not considered.

Electric power, current and voltage

$$V = R * I$$

V = Voltage [V]
R = Resistance [Ohm]
I = Current [A]
P = Power [W]

$$P = V * I$$

Example single-phase:

V = 230V
P = 1 kW (e.g. LHS 21S CLASSIC, 139.869)

$$I = \frac{1000}{230} = 4.35 [A] \quad \rightarrow \text{single-phase}$$

$$I = \frac{P}{V} \quad \rightarrow \text{single-phase}$$

$$I = \frac{P}{V * \sqrt{3}} \quad \rightarrow \text{three-phase}$$

Example three-phase:

V = 3 * 400V
P = 6 kW (e.g. LHS 61S SYSTEM, 3 x 400 V / 6 kW, 142.496)

$$I = \frac{6000}{400 * \sqrt{3}} = 8.66 [A] \quad \rightarrow \text{three-phase}$$

Electrical output with voltage differences

$$P_{\text{act}} = \frac{V_{\text{act}}^2}{V_{\text{nom}}^2} * P_{\text{nom}}$$

Example:

V_{act} = 200V
V_{nom} = 230V
P_{nom} = 1 kW (e.g. LHS 21S CLASSIC, 139.869)

$$P_{200V} = \frac{200^2}{230^2} * 1000 = 756 [W]$$

P_{act} = effective Power [W]
P_{nom} = nominal Power [W]
V_{act} = effective Voltage [V]
V_{nom} = nominal Voltage [V]

Do not reduce voltage to control power with air heaters from the LHS PREMIUM or the LHS SYSTEM line!

Heating power calculated from air flow and temperature difference

$$P = c_{air} * \frac{1}{60\,000} * \dot{V} * \rho_{air} * \Delta T$$

Example:

Air flow	\dot{V}	= 1200 l/min
Temp. of environment	T_{start}	= 25 °C
Target temperature	T_{end}	= 500 °C

$$P = 1.005 * \frac{1}{60\,000} * 1200 * 1.204 * (500 - 25) = 11.5 [kW]$$

11.5 kW is the power required to heat the air to the target temperature.

For estimating the needed heating power, please consider:
Your process may also need energy for other wanted or unwanted effects (losses etc.).

P	= Power [kW]
c_{air}	= Heat capacity of air [kJ/kgK]
\dot{V}	= Air flow [l/min]
ρ_{air}	= Density of air [kg/m³]
ΔT	= Temperature difference [°C]
$\frac{1}{60\,000}$	= Conversion factors due to chosen units

Specific heat capacity of air c_{air} : 1.005 kJ/kgK
Density of air ρ_{air} : 1.204 kg/m³
(at 20°C and 101.3 kPa)

Heat loss via Isolation

$$\frac{Q}{t} = \lambda * \frac{A}{d} * \Delta T = P$$

Example:

Box made from Styrofoam	
Dimensions (H*W*T)	= 0.5 m x 1 m x 1 m
Wall thickness of box	= 5 cm
T inside box	= 80 °C
T outside box	= - 20 °C
Heat conductivity for Styrofoam	= 0.05 W/mK
The surface of the box is	
$A = 2 * (1 * 1) + 4 * (0.5 * 1)$	= 4 m²

$$P = 0.05 * \frac{4}{0.05} * 100 = 400 [W]$$

400 W are required to hold the temperature inside the box on 80°C with an environment temperature of -20°C.

P	= Power [W]
Q	= Heat energy [J]
t	= Time [s]
λ	= Heat transfer coefficient [W/m²K]
A	= Surface [m²]
d	= Thickness of wall [m]
ΔT	= Temperature difference [°C]

« Leister – the synonym for quality,
innovation and technology. »

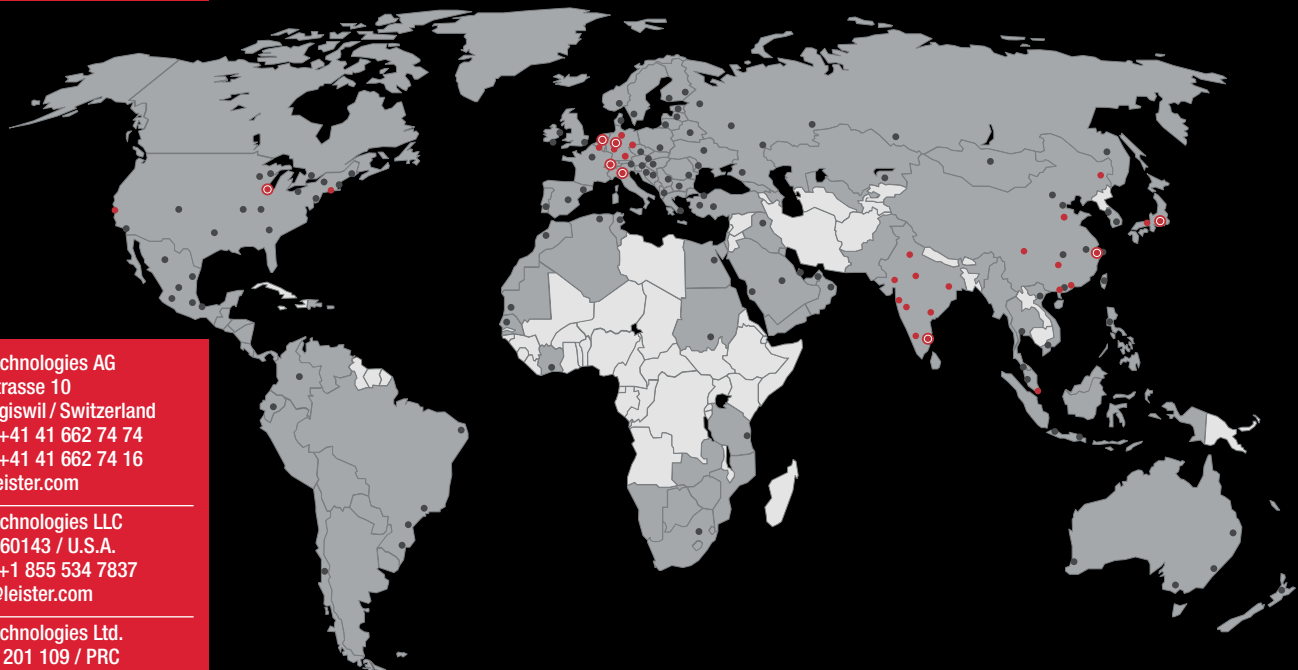

« With strong technical and application competence
Leister provides standard products and custom
engineered solutions to all major industries. »

« Recognized as the world-wide leader in
developing and producing quality products. »

« The Leister Group, its employees and distribution
network are committed to being strong and reliable
partners, giving you the opportunity to move your
business forward. »

« Serving all corners of the globe since 1949,
with representation in over 90 countries, we are
local world wide and close to our customers. »

We know how.
