Welcome

Civil Engineering – Tunnel Construction

FURRER Thomas
Product Manager Plastic Welding

Scope

Civil Engineering

Tunnel construction - drilling and blasting technologies

→Sealing inside

Civil Engineering

Tunnel construction open mining technologies

→ sealing outside

Civil Engineering

Landfil (to store toxic materials)

Civil Engineering

Landfil (Goldmine)

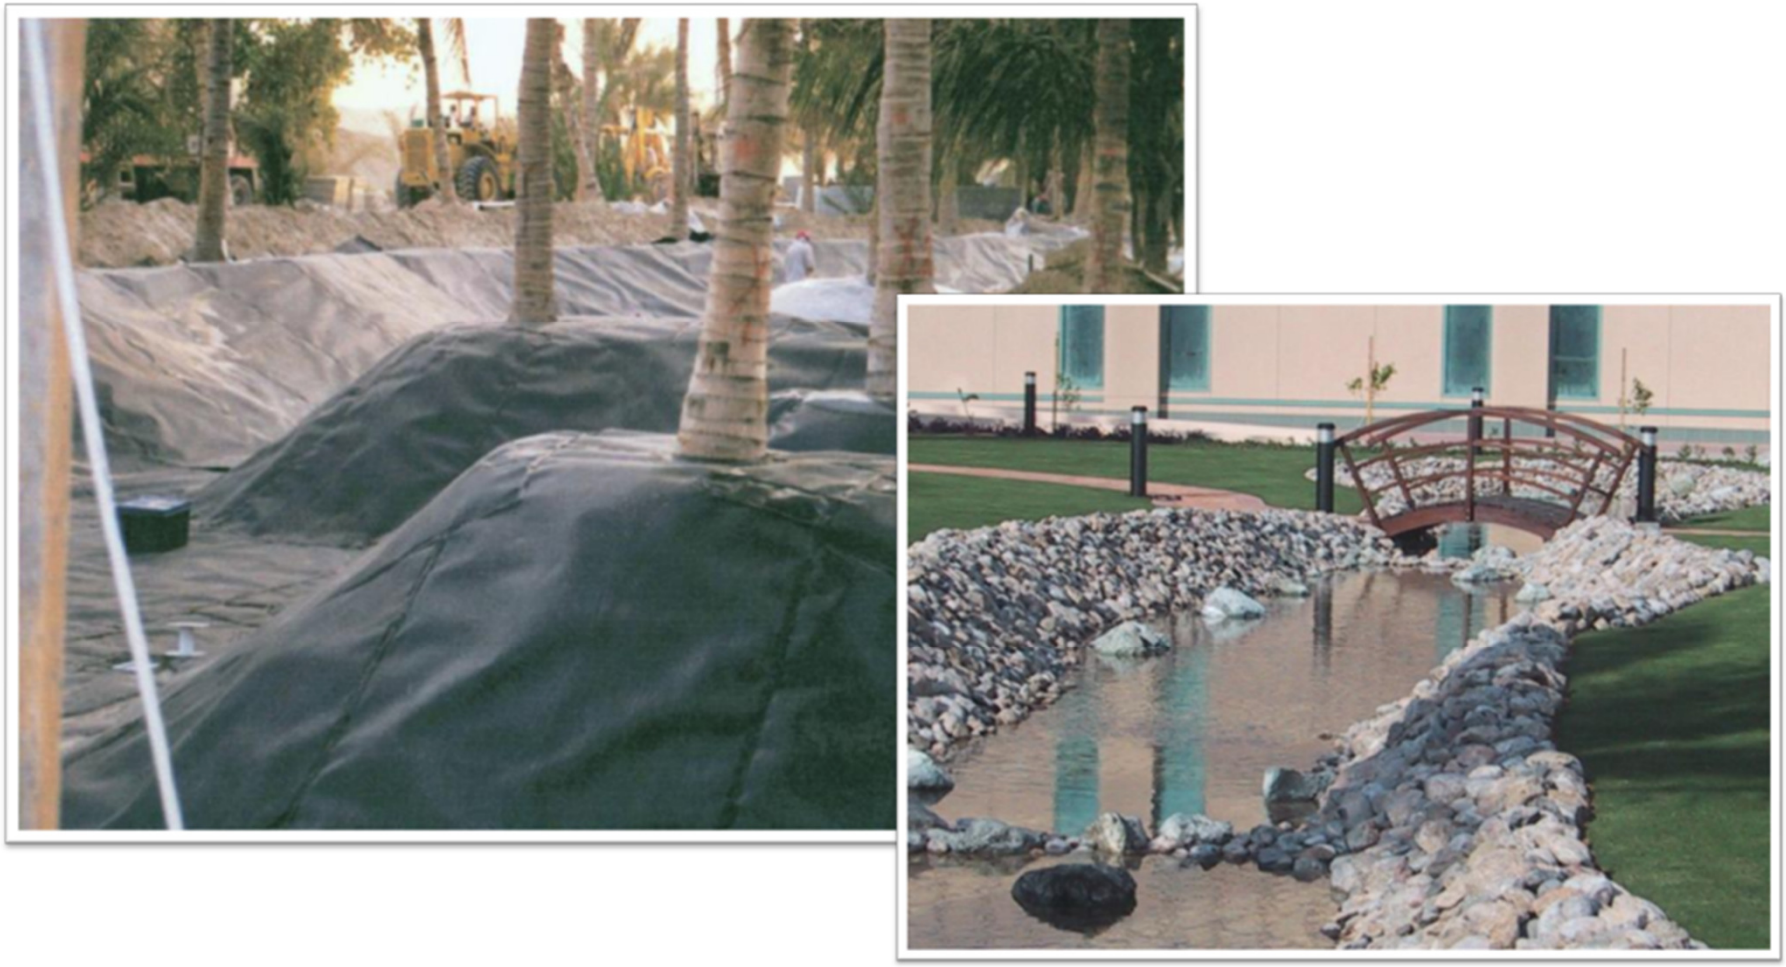
GOLD MINE, SAUDIA ARABIA
MATERIAL: HDPE 1.50 mm2 QUANTITY : 600,000 M2

Civil Engineering

Artificial lakes and rivers

Civil Engineering

Park and gardening

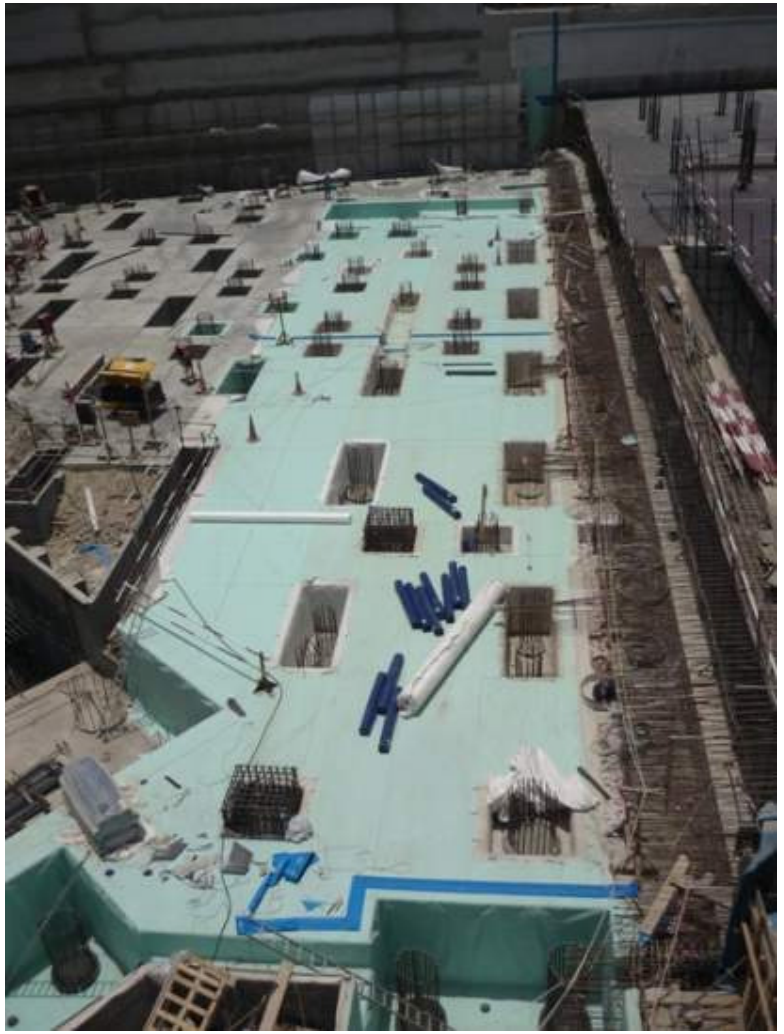


Civil Engineering

Sealing of dams (Colombia 2002)

Civil Engineering

Sealing of buildings



Civil Engineering

Secondary containment for ground water protection

Anwendungen

Secondary containment under oel thanks (Venezuela, 2009)

Welding Procedure

- Hot air welding
- Extrusions welding
- Hot wedge welding (element)
- Hot air welding

Welding Procedure

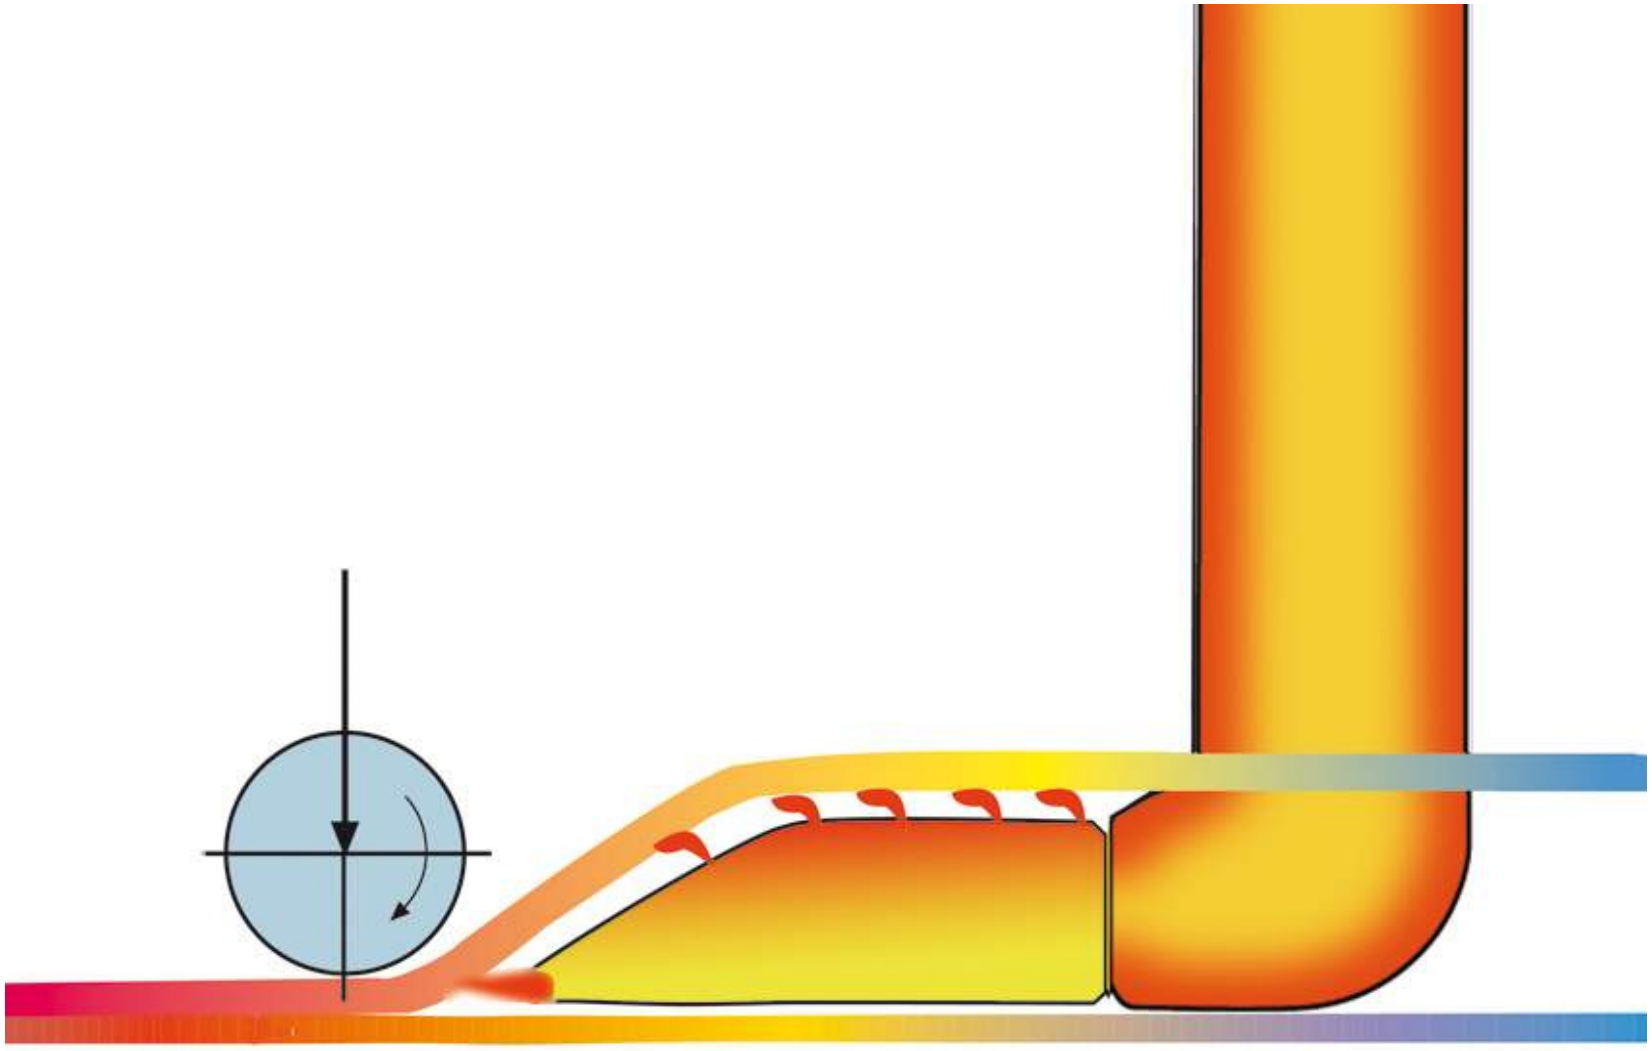
Following welding procedures are possible:

- Extrusion welding
- Hot wedge welding (element)
- Hot air welding

All welding procedures require an accordance of the following parameters:

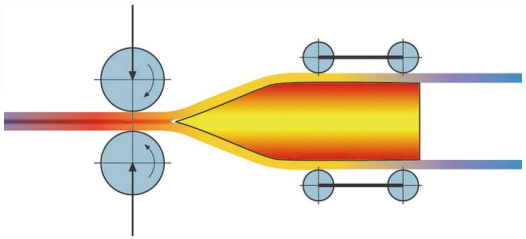
- Temperature
- Pressure
- Speed

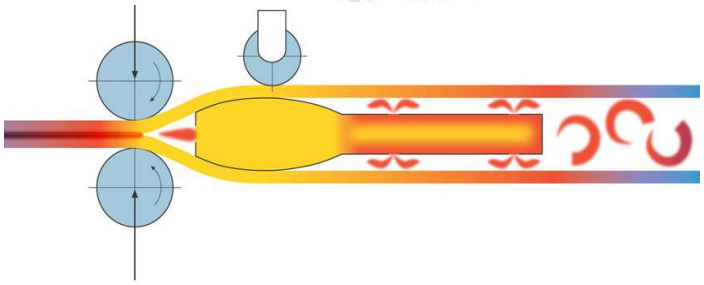
“Hot Air” Welding Procedures



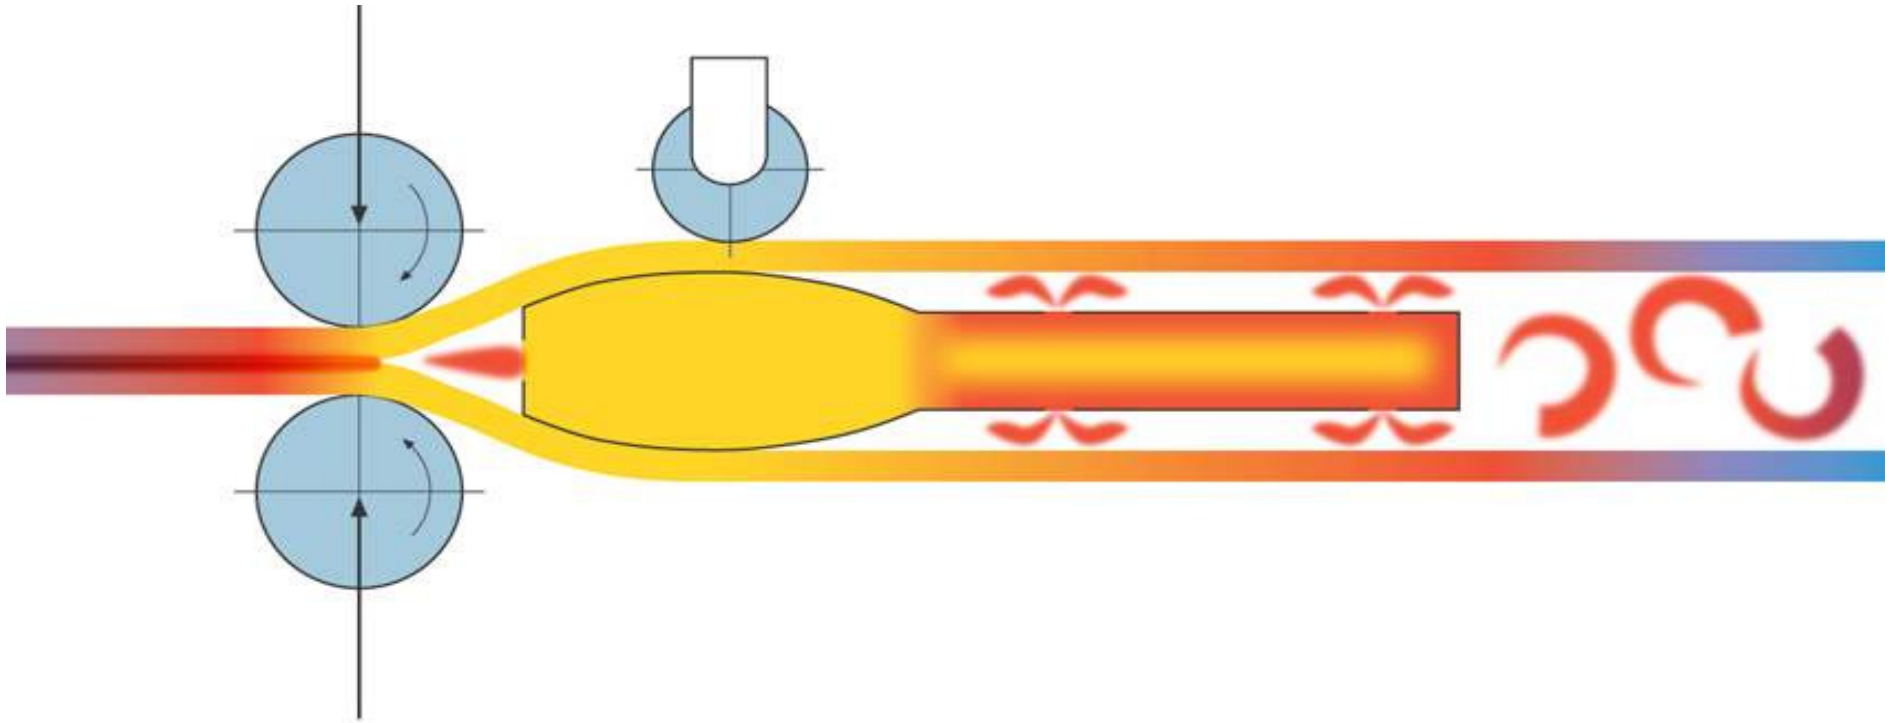
“Hot Air” Welding Procedures

Most common welding machines



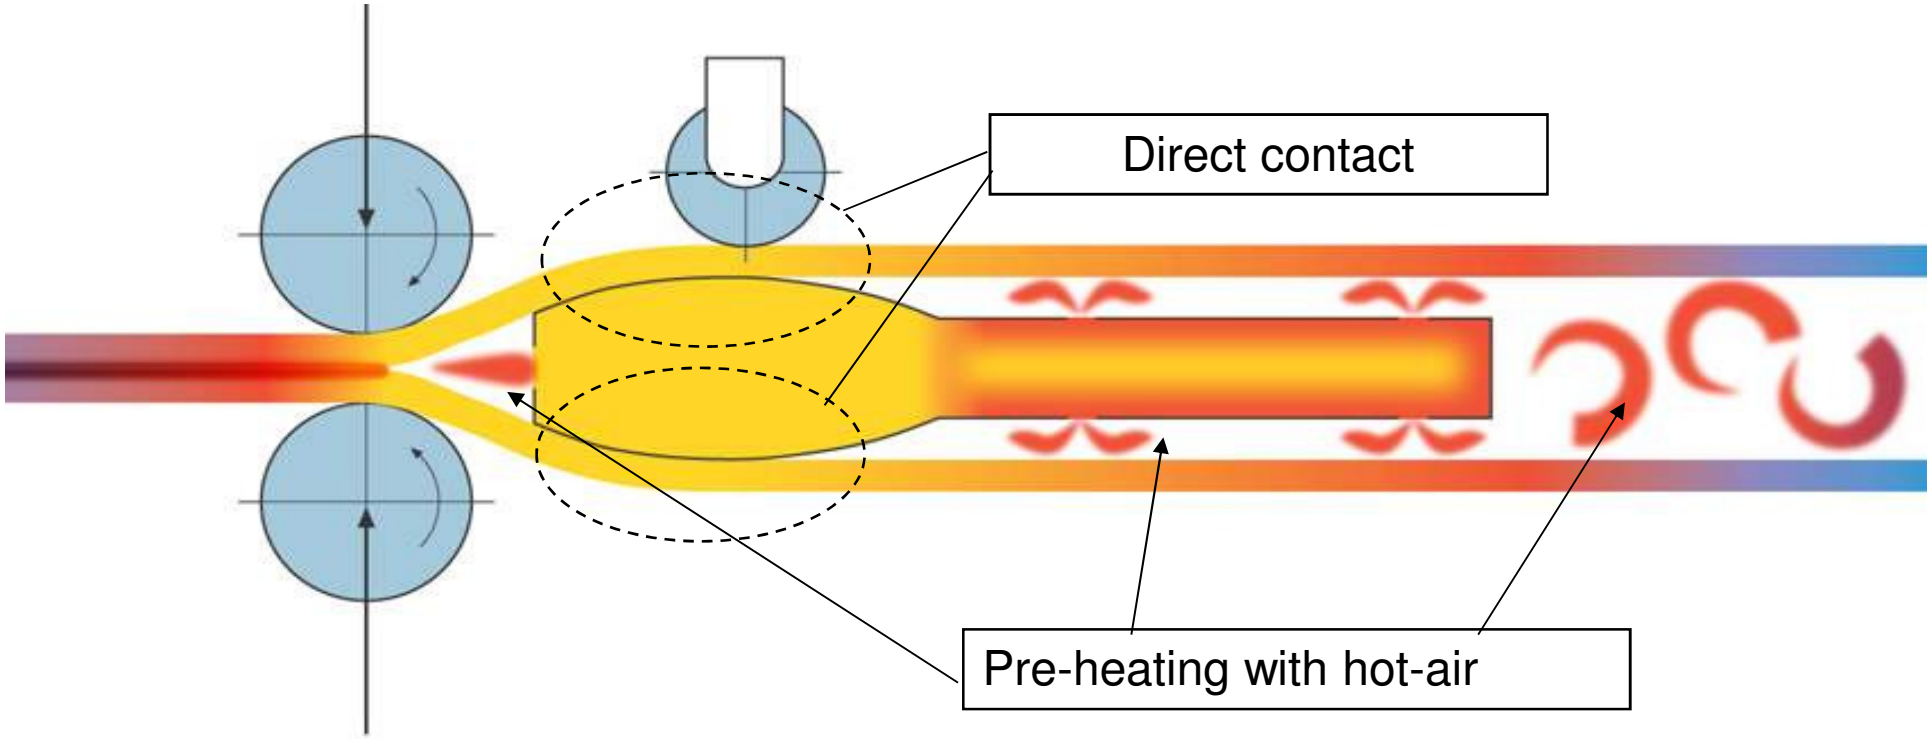


“Combi Wedge” Welding Procedures



TWINNY S **TWINNY T**

“Combi Wedge” Welding Procedures

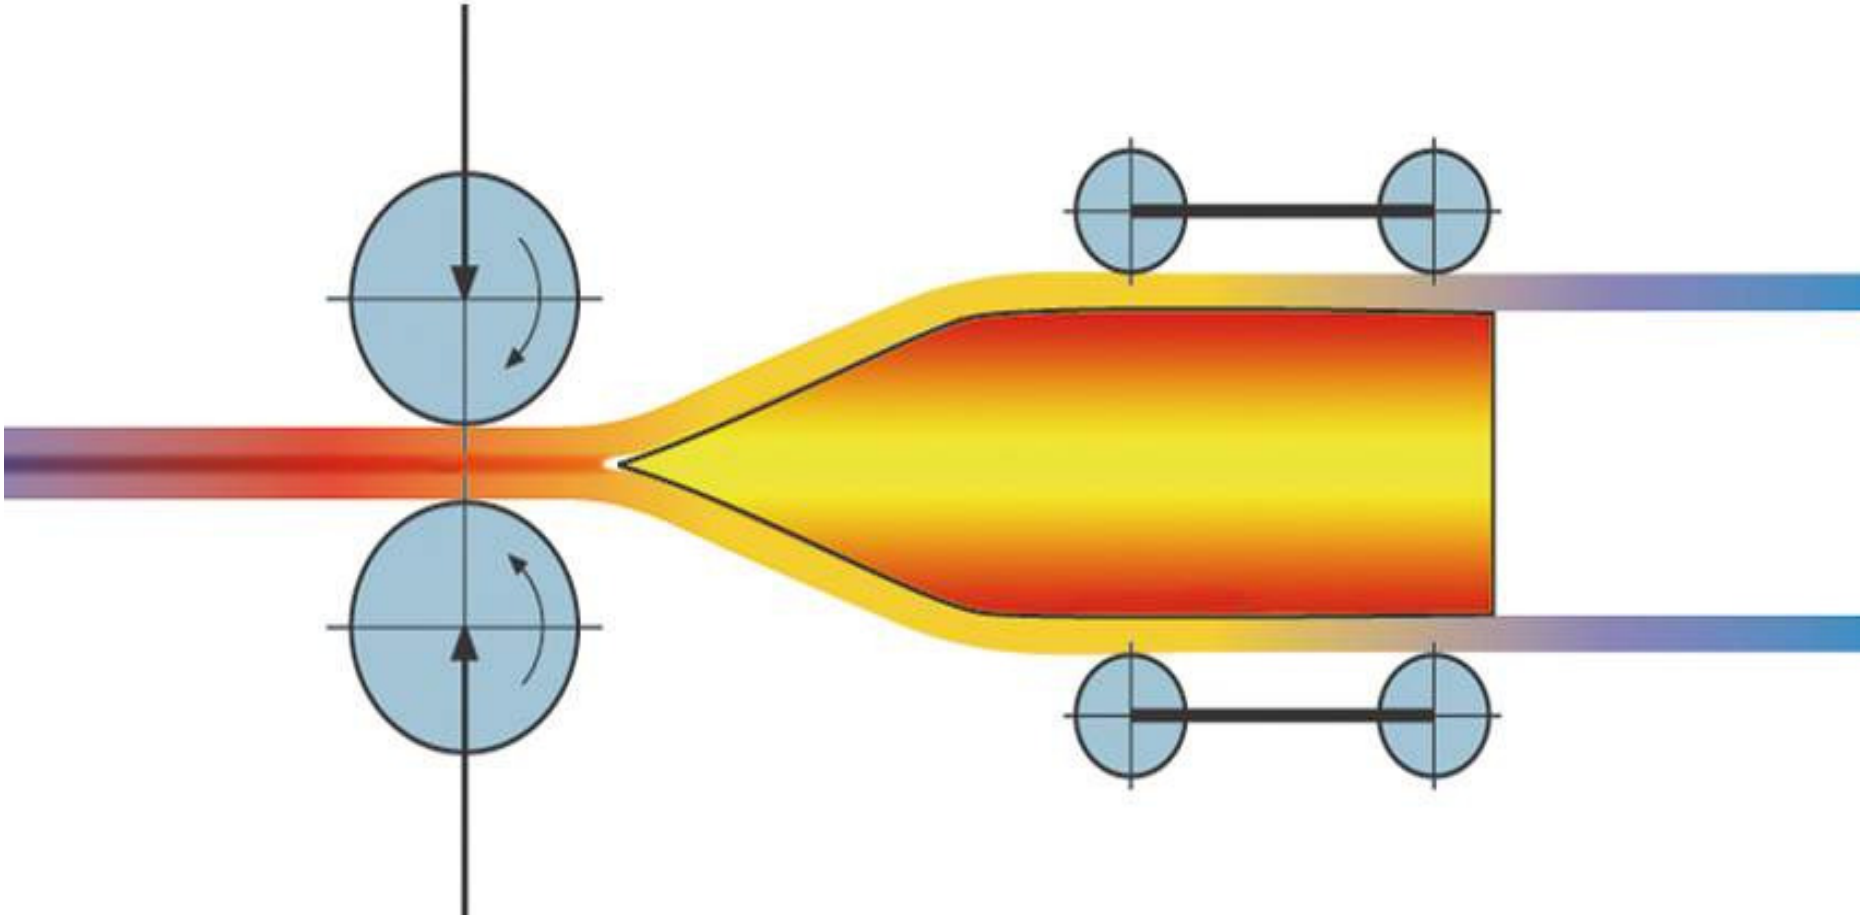


TWINNY S **TWINNY T**

“Combi Wedge” Welding Procedures

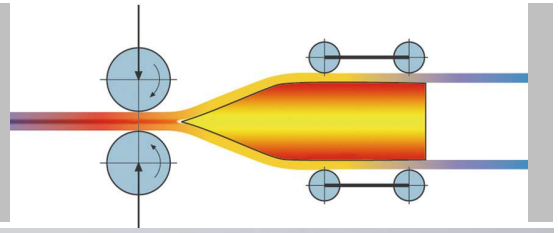
Combi wege long with test channel for Twinny T/S

“Wedge” Welding Procedures



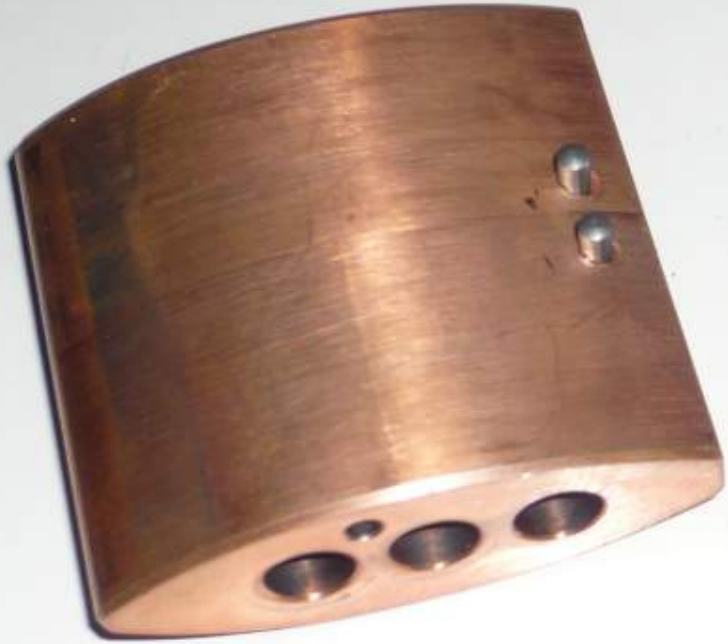
COMET ASTRO

Copper - Steel



Wedge Steel with test channel

Wedge Cooper without test channel

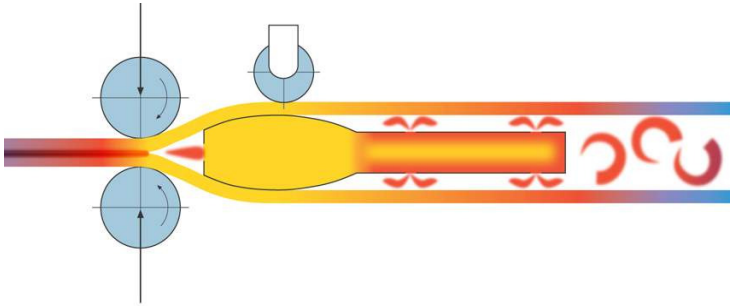


Overview “Combi-wedge” – “Wedge”

Combi-wedge

+ Thin material (down to 0,5 mm)
+ Blows away sand/dirt/humidity
+ No change of nozzle for PE and PVC

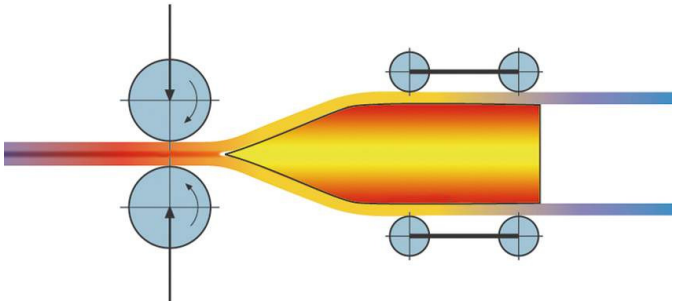
- Slower speed
- Energy consumption/noice
- Easy change of combi-wedge



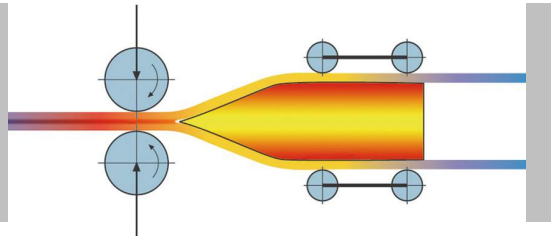
Wedge

+ Speed
+ No noice
+ Less energy consumption

- Unsoiled plastic sheets
- Absolutely dry plastic sheets
- Wedge is difficult to change



Overview Wedge Technologies



- Steel
- Copper
- Silver
- Ceramic

Overview Wedge Technologies

Steel, CrNi (PVC)

+ Low Costs

- Speed

Cooper (PE/PP)

+ Speed

- Corrosion with PVC

- Cost

Silver (PE/PP)

+Speed

- Costs

- Corrosion (connections)

Ceramic (PE/PP/PVC)

+ All types of material

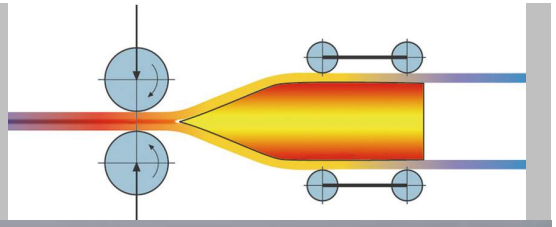
+ Free from wear

- Costs

- Mechanical stress/water

- Heat transfer

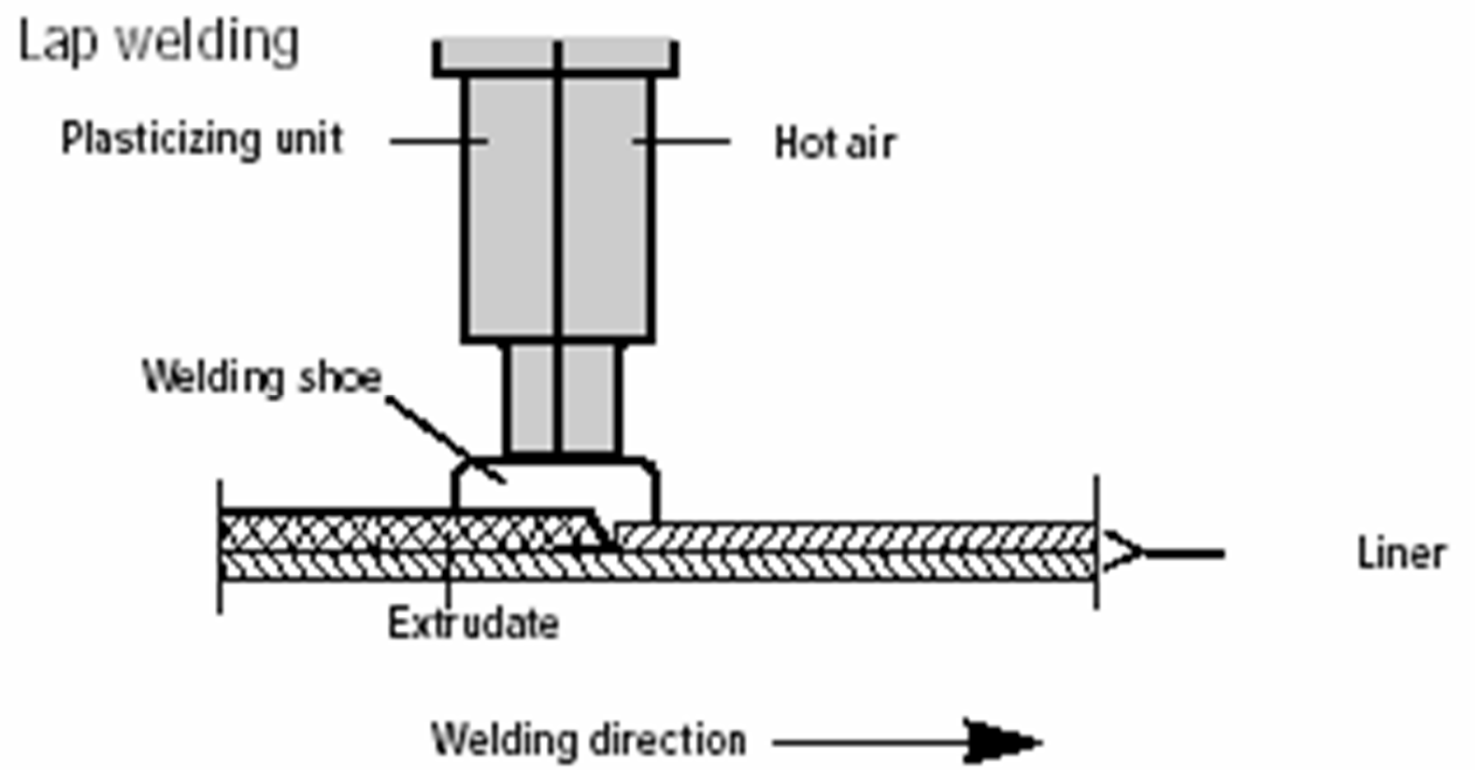
Copper – using PVC



Bad Example: wrong use of copper wedge!

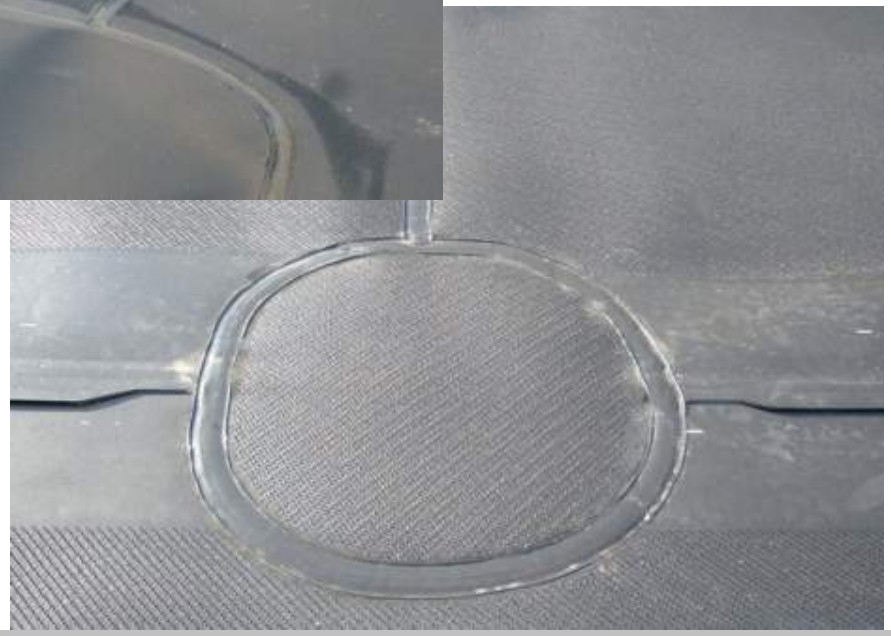
Corrrosion caused by PVC!

Extrusionswelding



FUSION 3 **WELPLAST** **WELDMAX**

Extrusionswelding



Welding Procedure Under Construction Site Conditions

Condition of Surface

- solid underground with smooth surface without bumps
- Building sites should be free of sharp items, roots and stones.

Environment Conditions / Weather Conditions / Rain

- In case of rain it must not be welded without any special safety measures.

Air Temperature

- Welding procedures have to be stopped at temperatures under +5°C in order to prevent high thermal strains of the membrane.

Welding Procedure Under Construction Site Conditions

- **Air Humidity**

High air humidity might cause perspiration water on the welding surface which is unfavourable for the seam strength (towel or pre-heat).

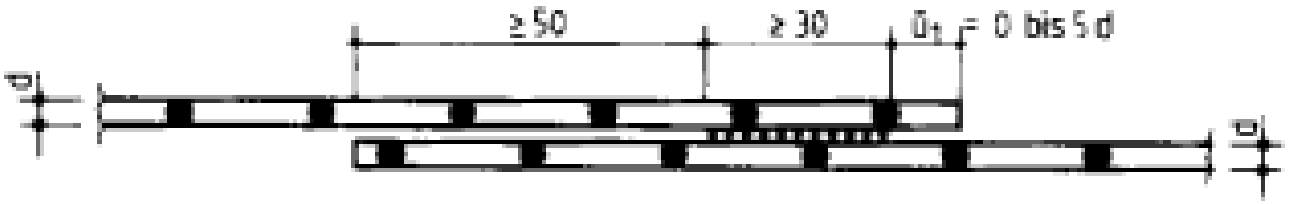
- **Wind**

Due to strong wind the required welding temperature might not be reached. To solve this problem, the welding temperature has to be increased up to 20–30 °C. If the wind is too strong, the welding area should be protected, or the welding process has to be stopped.

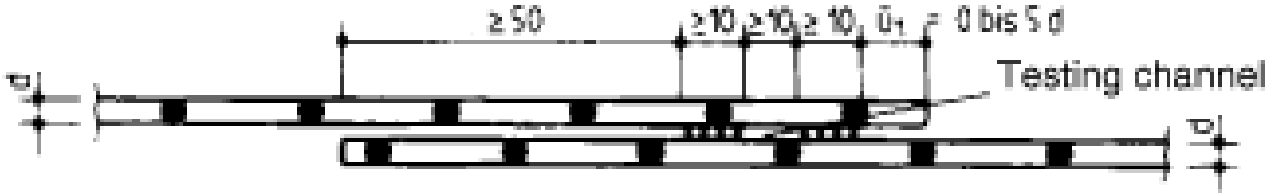
- **Sunshine**

Sunshine causes strong heat, especially of black membranes. This causes an increased thermal expansion of the membrane and results in wrinkles. The welding process becomes more difficult, and when cooling down abnormal strain in the seam area occurs.

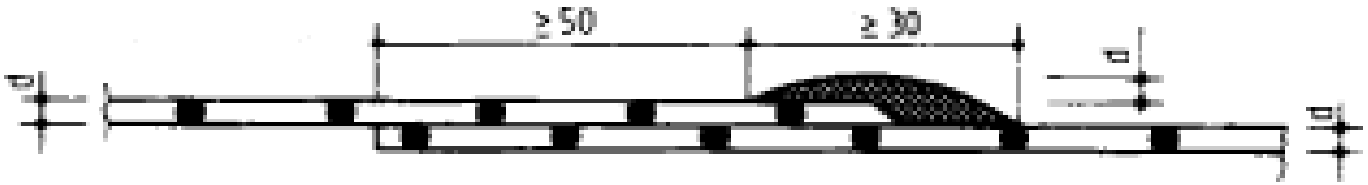
Welding shape according DVS 2225 Teil 1



Lap joint without testing channel – single weld
(Welding with or without welding filler)



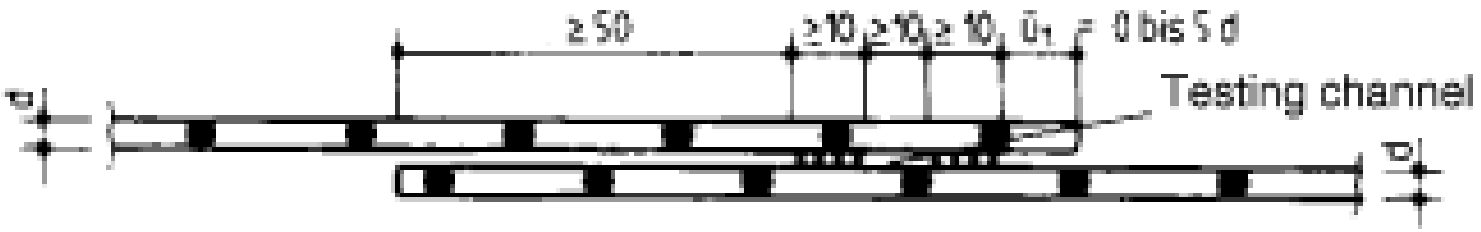
Lap joint with testing channel – double weld
(Welding with or without welding filler)



Coating weld (extrusion welding)

Test procedure: Test according DVS 2225 Teil 2

- **Outer appearance of the seam**
  (visual control of notches, grooves and irregularities)
- **Examination of the dimension** (measuring)
- **Strength test** (tensile test)
- **Leak-tightness test** (Testing with compressed air)



Lap joint with testing channel – double weld
(Welding with or without welding filler)

LEISTER

Automatic Machines

Wedge Welding Machine

ASTRO
Wedge welding machine

- Worldwide the fastest wedge welding machine
- Very robust
- One-handle operation
- HD-PE 1.5 - 3 mm

ASTRO USB

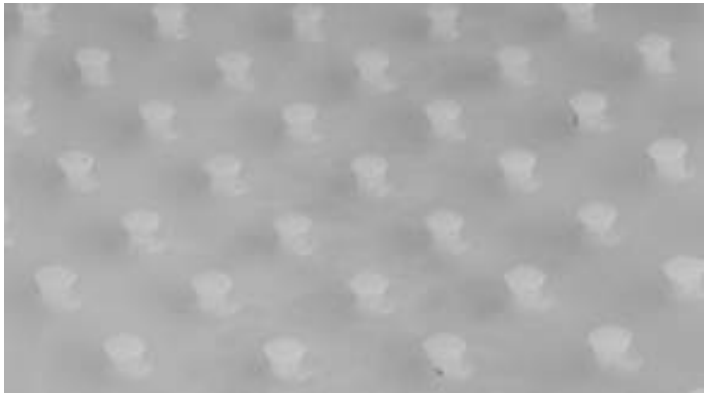
- Data recording all important welding parameters
- Akustical alarm funktion
- For work according DVS 2225-4

ASTRO CPL

- For conrete protection liner
- Faster than conventional welding procedures
- Up to 3.5mm membranes /up to 19mm nap-material

Concrete Guard Plates – Nap Membranes

Omega - naps



T - naps

V - naps

Flat naps

TWINNY T Combi wedge

- Small and handy
- Combi wedges easy to change
- Suitable for all materials
- For Membranes of 0.3 - 2.0mm
- Digital controlled
- USB-Data-Recording possible

TWINNY S: Different Gears

Gear 144:1

- Speed of *1.4 – 4.0 m/min*
- Version up to 6m/min (128.808)
- Max. pressure of 500N
- Thin materials are suitable
- Current limiter (motor switches off)

Gear 256:1

- Speed of *0.8 – 2.5 m/min*
- Max. pressure of 1000N
- Thick materials are suitable
- Current limiter (motor switches off)
- Version rapida up to 6 m/min

TWINNY S / T: Application Range Nozzles

Combi Wedge		Material	Thickness
	1	PE-HD, PE-C, PFA, PP PVC-P, PE-LD, EVA	0.3 - 1.0mm 0.3 - 2.0mm
	2	1 short combi wedge with test channel 2 short combi wedge without test channel	

Combi Wedge		Material	Thickness
	3	PE-HD, PE-C, PFA, PP PVC-P, PE-LD, EVA	0.8 - 2.0mm 1.0 - 3.0mm
	4	3 long combi wedge with test channel 4 long combi wedge without test channel	

Differences of Hot Wedge and Combi Wedge

	Hot Wedge	Combi Wedge
		
Advantages:	▪ Small heat output ▪ Compact design ▪ Low noise	▪ No change of nozzle (PVC/PE) ▪ Suitable for thin materials ▪ Blows away dirt in the seam ▪ Stress-free welding procedure
Disadvantages:	▪ Change of wedge PVC/PE ▪ Depending on weather ▪ Cleaning of seam absolutely ▪ Necessary when wet	▪ High heat output (wattage) ▪ Slow speed

Useful welding parameter for HDPE Membranes

Please note: the indicated welding parameter may vary depending on the ambient temperature and the material configuration. Test welds needs to be done and the parameter aligned accordingly !

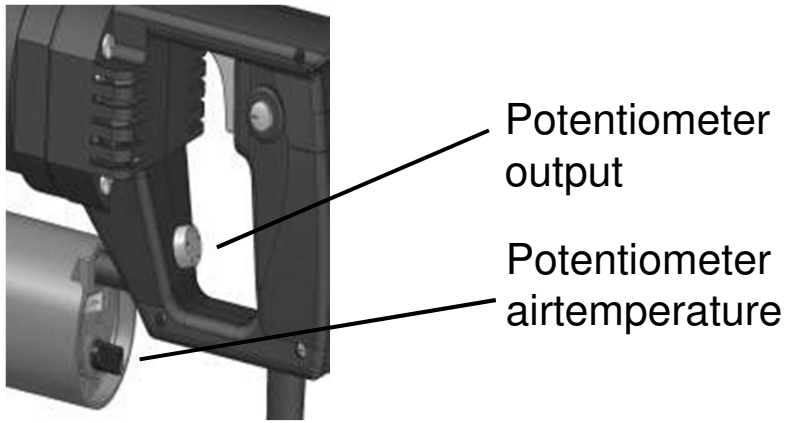
Weldplast S6

Extrusion Welding
FUSION 3

- **Compact and handy**
- **Very simple handling**
- **Unique price/performance ratio**
- **Protection of drive with overload and temperature protection**
- **Welding shoe 360 degrees swiveling**
- **output**
  PE (3mm) 1.6 – 2.3 kg/h
  PE (4mm) 2.0 – 3.5 kg/h
  PP (3mm) 1.3 – 2.0 kg/h
  PP (4mm) 1.5 – 2.7 kg/h
- **weight 7.2kg**
- **dimension 670 x 90 x 180 mm**
- **Delivery in a strong case**



WELDPLAST S6

- Very high output with 6kg/h
- Extremely strong preheat
- Ergonomic “steering wheel” handle
- Also for Tool rest
- Digital control of welding parameter
- Compact housing
- Protects electronics, motor & mechanics in rough conditions
- Security through restart protection
- User friendly
- Maintenance free blower unit
- CE Conformity, Tested externally by SEV (official certification body by IEC)
- Extrem strong carring box

WELDPLAST S4

- Digital close loop control and read out of plast and air
- Multifunctional display
- Maintenance-free blower
- DVS und CE-Conform
- Twist free welding rod feed on both sides
- Output 4kg/h
- Gewicht 8.7 kg
- Dimension 560 x 110 x 300 mm
- Delivery in strong LEISTER-Case

WELDPLAST S2

- Closed-loop control for plast and pre-heating
- Multifunctional display
- Twist free welding rod feed on both sides
- 360° turnable welding shoe
- Stepless adjustable handle
- Electronic drive protection
- Maintenance-free blower
- Small and powerfull
- One push settings for common materials
- Free configurable menus

LEISTER

Semi automatic and hand tools

Hand Tools – Semi Automatic Welding Tools

TRIAC PID

TRIAC S

TRIAC DRIVE

TRIAC DRIVE – Application

- Horizontal, vertical, diagonal
- Different welding seam widths
- Applicable in the most confined spaces
- Ideal job for diagonal connections in a tunnel

Civil Engineering

Triac Drive for sealing strips

TRIAC S / PID – Application

Overlap welding of connections with TRIAC PID (PVC-P or modified PE)

Tacking of HDPE membrane prior to extrusion welding

Test equipment

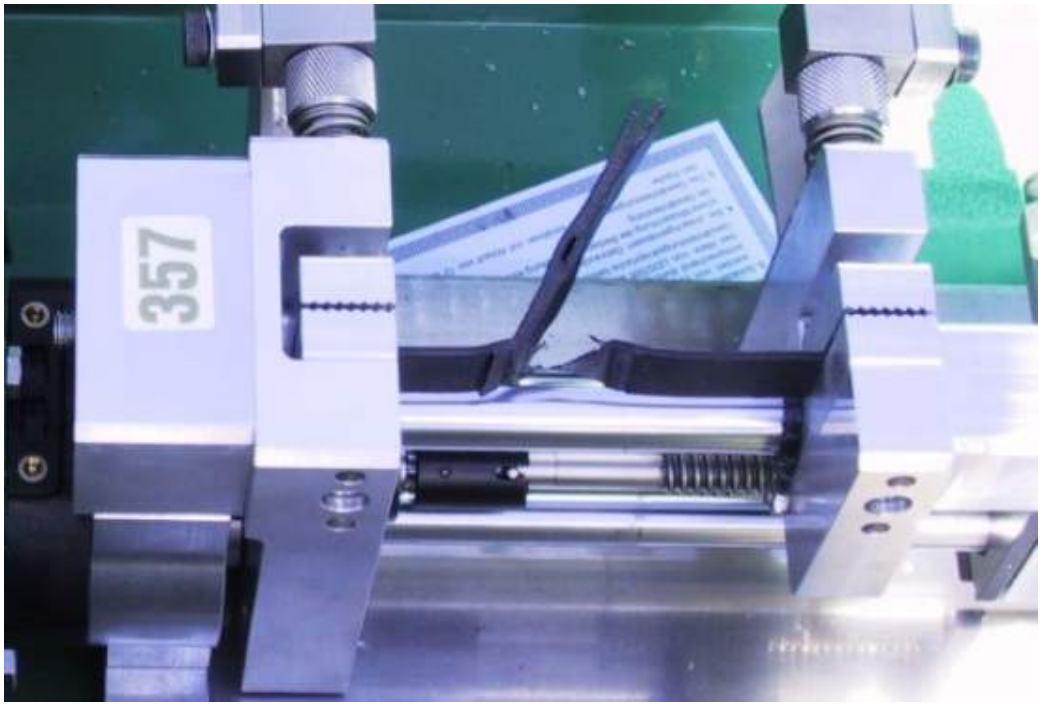
- EXAMO
- EXAMO USB
- AIRPRESSURE TEST
- VAKUMTESTING

EXAMO for peeling, tensile and shearing tool

- Portable and designed for construction site conditions
- USB-Data-Recording
- Optional for geotextiles
- Calibration-KIT availabel

Test Procedure: Test according DVS 2225 Part 2

Strength test (tensile test)



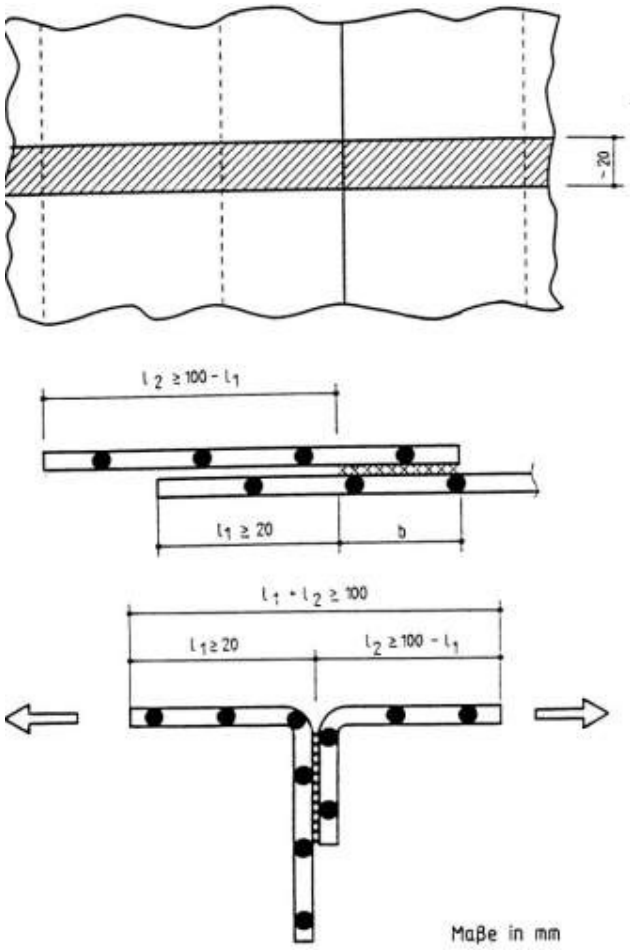


Bild 4. Probenahme und Beanspruchung beim Schälversuch.

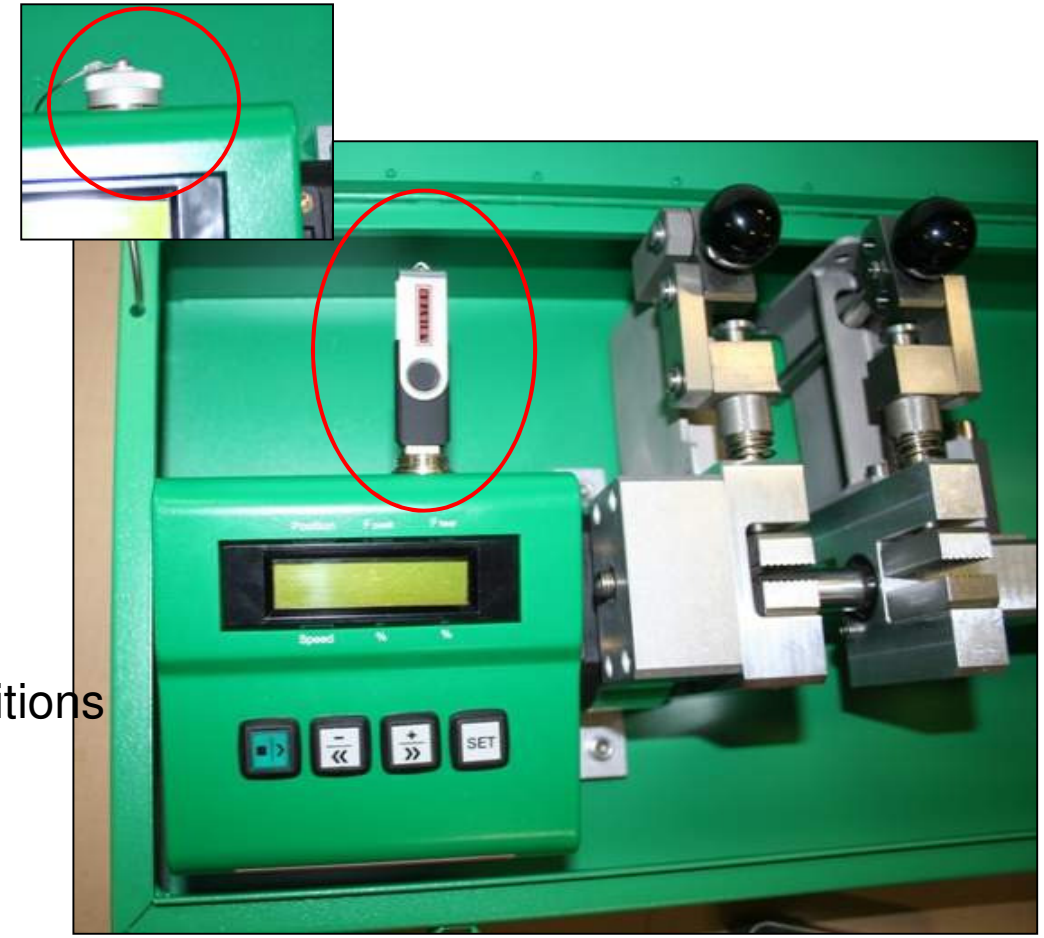
EXAMO USB



- Recording of measurements values direct to USB-Memory stick
- Very easy to use
- Proved also under heavy duty conditions
